INSTRUCTIONS FOR USE  
GUCCI DIVE  
AUTOMATIC WATCHES

GUCCI

## INTERCHANGEABLE STRAP

The watches of the Gucci Dive collection are delivered with an additional strap, featuring an interchangeable system and specific tool to facilitate strap changes.

### Illustration 1 and 2: removing the strap

1.

Place the watch flat, insert the point of the tool into the specific housing, and push inward.

2.

Remove the strap from its housing, and then repeat the operation on the other part of the strap.

## Illustration 3 and 4: fitting the strap

3.

Take one part of the new strap, and carefully position it as shown in image 3.

4.

Insert the point of the tool into the specific housing, and push inward to slide the bar into its allocated position: then repeat the operation on the other part of the strap. Make sure that the strap is secured on both sides.

**Note:** position the short part of the strap at 12 o'clock, and the long part at 6 o'clock.

## WARRANTY

Gucci offers a 2 year international warranty for its timepieces, valid from the date of purchase. The warranty is only valid if the warranty certificate has been duly completed by the dealer upon purchase. The warranty certificate must include the name or model number, the serial number, and the date of purchase. The warranty covers any fault arising from defective parts or a manufacturing flaw.

For any service or repair operation, your Gucci watch must only be entrusted to one of our Gucci watch branch repair centers, as listed at the end of this warranty booklet.

The Gucci watch branch reserves the right to repair or replace components required for your watch to function correctly.

The warranty does not cover:

- damage or faults caused by an accident, inappropriate use or negligence
- damage caused by normal wear of the case, the strap and its buckle, the crown, the bezel or the crystal
- normal wear and ageing of any material
- use of the watch not in accordance with the general recommendations on the next page
- the watch, or one of its components, if it has undergone an operation by a third party other than a Gucci watch branch

## General recommendations

To ensure your watch provides complete satisfaction for many years to come, please follow the instructions listed below:

- Avoid placing your watch near devices generating strong magnetic fields.
- Wherever possible avoid any impact that might damage your watch or affect its running.
- Avoid exposing your watch to extreme temperatures or temperature variations (solar radiation, halogen spotlight, etc.).
- Avoid direct contact with solvents, detergents, perfumes, mosquito repellent or any chemicals, since they may damage your watch's components.
- The water resistance of your watch has been tested to at least a pressure of 30 bar, approximately corresponding to a depth of 300 meters. However, the absolute water resistance of a watch may not be permanently guaranteed. It may be affected by ageing of the gaskets, accidental impact on the crown or crystal and other external factors. We recommend having your watch's water resistance tested by a Gucci watch branch repair center once a year.
- Never operate the crown when the watch is wet or underwater to prevent water penetrating into the case.
- Use soapy water and a soft brush for cleaning the rubber strap and the water resistant case. Rinse with clean water to eliminate washing residue. Never use cleaning agents. Wipe down with a soft cloth.

- Always rinse your watch in lukewarm water after use in a saline or chlorinated environment (sea water, swimming pool).
- When changing the strap, make sure that the bar is correctly repositioned in its housing in order to ensure that the strap is secure.

## Natural materials

Strap made from leather and other skins, straps made from natural materials:

Since these materials are natural, be sure to protect your strap from prolonged exposure to the sun and moisture, so as not to alter its shape and color.

Avoid immersion situations such as wearing when swimming.

The characteristics of natural materials mean that their structure and irregularities may be visible, which makes each piece unique and exclusive.

## Protecting the environment

Spent watch components must not be disposed of in the rubbish bin, but be recycled properly, in accordance with current national laws. We recommend in particular taking them back to your outlet.

## INSTRUCTIONS FOR USE

Instructions for watches with GP3300 Sowind Manufacture automatic movement.

### Display and functions

**1** Hour

**2** Minute

**3** Date

**4** Unidirectional rotating bezel

**5** Screwed crown

**6** Power reserve  
indicator at 5 o'clock

**7** Small second at 9 o'clock

# GUCCI

Automatic watches draw their energy from an oscillating weight activated by the natural movements of your wrist. This winds the watch.

The minimum power reserve is 46 hours. If the watch has stopped (e.g. if it has not been worn for a long time or in case of limited activity), it must be wound manually – unlock the screwed crown by turning it anti-clockwise to position I, and rotate the crown a few times clockwise. Then press the crown in while simultaneously turning it clockwise to screw it back into position 0.

Note: the accuracy of the time is influenced by how the watch is worn.

Normal running position: crown in position 0, screwed against the case.

Correcting the date: unscrew the crown and pull it out to position II. Turn it clockwise until the desired date is displayed.

Push the crown back into position I and screw it back into position 0.

During this operation, your watch will keep running, so the time does not need to be corrected.

Setting the watch time: unscrew and pull out the crown to position III, the second hand will stop. Turn the crown clockwise or anti-clockwise to the desired time.

Push the crown back into position I and screw it back into position 0.

After any setting, be sure to screw the crown carefully back into position 0 to keep your watch water resistant.

Make sure that the date changes at midnight, and not at midday.

NB: do not correct the date between 8 p.m. and 2 a.m. because this may damage the movement.

## **Screwed crown**

Make sure that the crown is always pushed and screwed back into position 0 (normal running position) once used, to prevent moisture or dust penetrating into the case.

To do so, press the crown in against the case while turning clockwise to return it to position 0.

**Important:** this operation is essential to ensure your watch's water resistance.

## **Unidirectional rotating bezel**

The rotating bezel is used to measure dive times – or more precisely to monitor them.

As a safety measure, the rotating bezel turns only one way.

Use – Measuring short time periods

Align the luminescent mark of the rotating bezel with the minute hand. You will be able to read the elapsed time on the rotating bezel's minute graduation.

## **Power reserve**

The power reserve indicator shows the current winding status of the timepiece.

## **Luminescent display**

The hands, indexes and guide-mark on the rotating bezel are partly covered with SuperLuminova®, which charges up in a few seconds in light for prolonged visibility in darkness.

## **Important note**

Water resistant to 300 meters (30 ATM / 1000 feet), your Gucci Dive collection watch meets standard ISO 6425 and Swiss watchmaking standards NIHS 92-11 specific to diver watches.

However, your watch is not suitable for deep dives.

We recommend you avoid swimming with a leather strap, in order to prevent accelerated wear.
